Enghouse Interactive

Interactive Video Collaboration

VidyoConnect™

Industry-Leading Security

Overview

Enghouse Interactive understands the current high level of concern about video-conferencing security. With the recent media coverage about videoconferences being breached, inappropriate content being shown to school kids, government meetings being held with unauthorized participants listening in, the Interactive Video Collaboration solution ensures that these exposures will never be one of your concerns. Here is a brief overview of the commitment we have made to protect your organization's video conferencing security:

Cloud Deployments
World-class hosting facilities used around the globe, ensuring the highest levels of security with lowest possible down time. Firewalls are regularly assessed and updated to remain effective against illicit access. Intrusion prevention and detection systems provide proactive network surveillance and monitoring designed to protect the critical application environment.

On Premise Deployments
Unlike many competitors, Vidyo supports a 100% on-premises deployment option offering ultimate privacy and security for full control over their video solution.

VIDEO SECURED

Highest Standards

- SRTP media encryption
- FIPS 140-2 certified libraries
- Secure HTTPS login utilizing industry-standard PKI
- TLS using strong encryption ciphers for signaling

Protect User Data

- No user data shared with 3rd-parties
- No login info retained on the client
- Encrypted token technology for session security
- Password hashing in database

Manage Threats

- Vidyo Security Council regularly updates security policies, processes and reviews potential threats
- QA team uses industry-leading security scanning tools such as Tenable Nessus, Rapid 7 Nexpose, and open-source OWASP tools
- Vidyo uses Qualys SSL Labs utility to help qualify that the server solutions meet the high security targets
